Hope for the Future Organic Farms and Gardens

*Join Helen Browning – Organic Farmer and CEO
of the Soil Association – to discuss organics, soil,
and the future of farming, with Q&A.*

Friday 8th March 2019

The Auditorium, The Forum -
Norwich

7.30pm - 9.30pm
Doors open 7pm

Helen's 2018 book 'Pig' sets out the challenges for sustainable food production, but also hints at the practical changes which might provide a solution. These changes would have major implications not only in increasing the contentment of our rural communities but also potentially a step change in the contribution of more urban food production which would leave more land available for environmental protection and social enjoyment.

Helen is an influential figure in countryside and farming and will bring her experience and views to what should be a lively evening of discussion and debate.

The event is organised by the Greenhouse Trust as part of the celebration of International Women's Day and to launch the 2019 contributions to its eARTH art exhibitions. The 2019 exhibitions are inspired by Clare Leighton's 'Calendar Year', a set of 12 wood-engravings which recorded farming practices of the 1930's.

The event and exhibition will explore some of the questions facing agriculture at this pivotal time for the global environment, juxtaposed against the images of agriculture presented by Clare Leighton:

What has changed? What will change? How can we all engage with ensuring eco-agriculture plays its vital part in the climate change challenge?

In memory of Peter Melchett, Patron for the Greenhouse Galleries eARTH project, a short extract from the BBC documentary 'Wild Harvest' will be shown. The film shows Peter on his farm in Kings Lynn. He discusses organic farming and the countryside: an opportunity to consider what has been achieved in the last 14 years and a hopeful vision for the future.
